jonathan.roques@gmail.com

+33 6 37 03 06 64

Born 25 Nov 1985

PROFILE

More than 15 years of experience in software development and technical leadership. Self-learner with demonstrated problem-solving skills and adaptation to complex domains and codebases. Autonomous, production- and customer-oriented, looking for growth and impact. References available upon request.

SKILLS

Technical

- Micro-services architecture
- Cloud providers: GCP, AWS
- Design patterns & code quality
- Problem solving

Languages & Frameworks

- Java · Spring (Boot, Cloud...)
- JavaScript / TypeScript
- Python
- React

EXPERIENCE

Tech Lead, Engineering — Camunda

Feb 2024 – Present

Berlin (remote), Germany

- Led end-to-end delivery of the Job Worker Dashboard (Po cross-team epic) with a 3-person team in ~3 months — became top committer on the Core monorepo despite it not being primary focus area
- Achieved 30× CPU reduction and 10× I/O throughput improvement through targeted performance engineering
- Authored the approved architecture proposal (Jobs Statistics API and engine-collected job metrics); led trade-off discussions across Connectors, Core, and Console teams
- Rebuilt the Connectors release pipeline: automated triggering, test parallelization, flaky test retries, and Slack observability — near-zero manual intervention per release
- Tech lead for a team of 5 engineers: mentoring, solution design support, incident response, and cross-team representation

Sr. Technical Lead — Alva Labs

May 2022 – Feb 2024

Stockholm (remote), Sweden

- Identified engineering-wide issues and led initiatives to resolve them (e.g. developer experience)
- Fixed broken cross-team processes with design and customer support teams
- Created a system design interview process, improving hiring quality
- Leveraged team members' strengths to maximise impact
- Worked with Terraform, Kubernetes (GKE), and PostgreSQL

Co-founder & CTO — Clozzle

Sep 2020 – May 2022

Toulouse (remote), France

- Defined and executed the product roadmap over 1 year
- Built infrastructure on AWS (Lambda, EC2, Cognito)
- Developed frontend and backend using Quarkus native (Java, Spring WebFlux)

Technical Lead — Nanolike

Nov 2018 – Sep 2020

Toulouse (remote), France

- Designed backend roadmap and microservices architecture (Kafka, Docker, AWS)
- Managed product development, team organisation, costing, 1:1s, sprint execution
- Maintained existing backend and delivered new features

Software Architect — Sigfox

Sep 2013 – Nov 2018

Toulouse, France

- Designed scalable and highly available microservices architecture (Java, MongoDB, Prometheus, Grafana)
- Reduced bandwidth consumption by 50% and increased device monitoring capacity ×10
- Handled up to 5 billion metrics per day
- Led architecture design, cost management, and system scalability
- Managed critical systems: message reception, storage, and transfer
- Designed and implemented RBAC system; trained team on new concepts

EDUCATION

Master's Degree — with distinction

2003 – 2008

Robotics, AI & Software Engineering

IUP Paul Sabatier, Toulouse, France
